Command Response

Directions:

1. Fire up a new python program in your directory, call it: ***command-response.py***
2. Copy the code below
3. Once you finish, have the program handle at least 3 more commands

```python
1   # Put your commands here
2   # Keep the values lowercase
3   COMMAND1 = "what?"
4
5   # Your handling code goes in this function
6   def handle_command(command):
7   """
8           Determine if the command is valid. If so, take action and
9           return a response, if necessary.
10  """
11      response = ""
12      if command.find(COMMAND1) >= 0:
13          response = "Huh?"
14
15      else:
16          response = "Why thank you, I don't know what else to say."
17
18      return response
19
20  print("Hi, I am sirexa, your own personal bot. Awaiting your command.")
21
22
23  while True:
24      command = raw_input('\nsirexa -> ')
25      response = handle_command(command)
26      print response
```
